

ABSTRACT OF THE DISCLOSURE

The automobile industry would benefit great by the invention of the rear light out indicator. It is a sensor light that illuminates once a rear light is out on the automobile. This rear light out indicator will require the automobile industry to simply add a sensor that illuminates in the area of the dashboard as other sensors such as the ones that indicate a need to refuel or that indicates low battery power, that the automobile is overheating, low oil or a need to service the engine.
